

STARA STUDY

(Stopping TNF Alpha Inhibitors in Rheumatoid Arthritis Study)

The study will look to answer a question, commonly asked by people with RA in remission who take anti-TNF agents,

“If I stop the medication, will I stay in remission?”

YOU MAY QUALIFY TO PARTICIPATE IF YOU

- Have been in remission for at least 6 months while taking anti-TNFs and DMARDs*
- Take Enbrel[®] (etanercept), Humira[®] (adalimumab) or Remicade[®] (infliximab)
- Want to help us improve quality of life of people with RA

For more information about the study, visit

<https://clinicaltrials.gov/ct2/show/NCT01793519>

*DMARDs (Disease-Modifying Antirheumatic Drugs) are a class of otherwise unrelated drugs defined by their use in RA to slow down disease progression, e.g. Trexall[™] (methotrexate), ARAVA[®] (leflunomide), Plaquenil[®] (hydroxychloroquine), Azulfidine[®] (sulfasalazine), Azoran[®] (azathioprine), cyclosporine, injectable or oral gold

Participation is voluntary and you may quit at any time without losing any rights or benefits you normally have.
